[Exo-erythrocytic schizogony of plasmodium falciparum in the monkey Cebus apella (author's transl)].

[Article in French]

Druilhe P, Miltgen F, Landau I, Rinjard J, Gentilini M.

*P. falciparum* sporozoites obtained by membrane-feeding of *Anopheles stephensi* with blood containing gametocytes were injected intravenously to the Monkey *Cebus apella*. 5 days later, a great number of exo-erythrocytic stages were found in the liver, and appeared to be morphologically similar to those described in man. The host specificity of the sporozoite seems less restricted than that of the merozoite.
